

EURORAIL CENTRUM DVD VIDEO

A month of video shooting of the railways in Austria, Switzerland and Germany is the subject of this DVD. In order to tell the story we spent four full days riding trains and drove 3300 kilometers shooting video all along the way. Most of the railway shots were made from track-side, as this angle provides the most spectacular view of the trains. However, while aboard trains, convenient windows also provided useful vantage points for additional footage. While you may recognize some locations be assured that this video was shot relatively recently and reflects eurorail of today.

You will see some of Europe's best high speed trains, Austrian Railroad Museums, trains along the left bank of the Rhine, and motive power from steam to electric. We found sites where train traffic increased and others where it had decreased. This DVD clearly reflects the changing rail traffic of Europe.

We hope you enjoy the trains and scenery as much as we did when doing the shoot.
